

A VISION OF HOPE

All of us are often affected by the rise and fall of the price of petroleum products in the world market. This is aggravated by the peace and order situation in countries where it originates. It's sad to think that we are too much dependent on the energy of fossil fuels. Besides that it's expensive to burn and bad to the environment but still we have the monstrous appetite to use it. The reason is that, it's really needed. We have no other choice to make the economy going for the benefit and welfare of the people.

I have a VISION OF HOPE that the world's economy will become better, much better than today despite of the present problems that we are facing. Many countries are now more interested to fund projects for the speedy development of green technology and renewable sources of energy to power our future. We have to move away from the slavery of fossil fuels. It's about time to focus our attention to find the concrete solution to make the future generations live a happy life.

As a research inventor and with my brother Abraham we have the obligation to fulfill the dream of peace, love and abundance to all. It's hard to say like an authority that we got the right formula of a practical solution to these worldwide problems.

The solution of our present problems in energy, environment and economy are related to our TZUY TURBINE invention. This is a new design of a simple turbine that has many applications in electrical power generation and in new propulsion system to power transportation vehicles on land, water and possibly air.

If you have read meticulously and understand the facts of my claims without any doubt, perhaps you can visualize the upcoming abundance that's soon to happen. Although it may be hard to believe that it's going to happen, however, the theoretical possibility of the two unused natural forces of nature that I carefully presented in this invention disclosure is a real proof that it has no technical flaws to realize this dream of abundance. We are deeply concerned about the 2 unlimited sources of energy that can power our world for FREE.

At present there are no known devices that are designed to harness scientifically the GRAVITY POWER and HYDROSTATIC POWER except the twin-rotor TZUY TURBINE which I consider a heavenly gift to all by the ALMIGHTY GOD.

We firmly believe that all things are possible with GOD!
